

PRODUCT INFORMATION

Effective control over insects for up to 90 days

- Vapona is a 'continuous action' insecticide strip, that provides long lasting control against ants, cockroaches, flies, fish-moths, moths, mosquitoes, fleas and lice
- It is well known and trusted in South Africa as the most efficient way of ensuring that rooms and cupboards remain insect-free
- Vapona is safe for use near people and domestic animals, due to the low concentration of its active ingredient, a pesticide known as Dichlorvos (DDVP)
- Originally launched by Shell Chemicals in 1965, the brand has retained its leading position through a combination of efficiency and long lasting action – shown by the independent laboratory tests of a recognised authority, to achieve 100% 'knock-down' for up to 90 days
- The product is a PVC strip that has been impregnated with DDVP and packed in a heat sealed aluminium envelope, resulting in a shelf life of up to 5 years
- Once opened and utilised in its aerated cardboard holder, the insecticide is released by continuous vaporisation to create an effective insecticidal atmosphere for up to 90 days
